SUBJECT INDEX

AIRGLOW, NIGHT

emission variation, effects of gravity waves, 1105
hydroxyl, origin of ripple-like wave structure, 1421
oxygen
  green and red lines, and O_2^+ dissociative recombination, 889
  green and red lines, equatorial F-region rocket data, 547
  green and red lines, intensities in S and N hemispheres, 1161
  limb emissions at 147um and 63um, oxygen density and temperature, 221
  $O(^1s)$ and O_3 ($b^1 g^+$) excitation parameters, 43
  O_2 Herzberg I system, vibrational analysis, 1399
  $O_2(^1 g)$, SME observations, production mechanisms, 529
  red line, comparison with ionospheric model and parameters, 1243
ozone, recombination bands in atmosphere, 1121

ATMOSPHERE, TERRESTRIAL

composition,
  density, semi-annual variations, from orbital analysis, 637
  geopotential harmonics, orbit analysis, see SPACECRAFT
  neutral thermospheric, from auroral spectroscopy, 67
  oxygen, atomic, from nightglow limb radiance, 221
dynamics,
  gravity waves, effects on airglow emissions, 1105
  turbulence, and spectral characteristics of ionospheric F-layer irregularities, 79
  wind oscillations and tidal effects, 1431
  winds, thermospheric, structure and fluctuations, 675
heating, Joule, thermospheric, 207
temperatures, thermospheric, oxygen nightglow analysis, 221

AURORA

arcs, sun-aligned, relation to polar cap convection and magnetic disturbances, 1
electromagnetic disturbances due to electric and magnetic field variations, 97
emission, pulsating, and geomagnetic pulsations, 149
emission, $OII(^2P)$, polar cap, 1367
excitation of $O(^1S)$, evaluation of time-varying parameters, 161
excitation, vibrational, $O_2(b^1 g^+)$, 835
horn emission, mapping into the magnetotail, 1179
precipitation, see PRECIPITATION
radio, local scatterers, evidence from radio interferometry, 933
spectroscopic studies, thermospheric neutral composition, 67
O-aurora, cross-tail current disruption, 1361
transients at magnetic noon, 973

BOOK REVIEWS

Active Experiments/Critical Ionization Velocity, Vol. 10, No. 7
  Advances in Space Research, Ed. N. Brenning and M. Mendillo:
  Rev. E. Murad and S.T. Lai, 1223

Astronomy and Astrophysics Abstracts, Vol. 49, A and B 1989, Part 1,
  Ed. G. Burkhardt et al: Rev. S. Bradley, 702

CEDAR, J. Atmos. Terr. Phys., Special Issues, Vol. 50 and 51, 1988 and 1989:
  Rev. R.G. Roble, 701

Cometary Environments, Ed. T.I. Gombosi et al: Rev. N. Neugebaur, 1478

Investigation of the Ionosphere by Means of Beacon Satellite Measurements, Ed. C. Chong: Rev. H. Rishbeth, 701

Physics and Chemistry of the Upper Atmosphere, M.H. Rees: Rev. R.G.H. Greer, 702

Satellite Data: Processing, Archiving and Dissemination, Vol. 1 and 2, D.R. Sloggett: Rev. P.A. Lamb, 1477

Smaller Solar System Bodies and Orbits, Ed. S.K. Runcorn et al: Rev. A.E. Roy, 1477

The Origin of the Solar System; The Capture Theory, J.R. Dormand and M.M. Woolfson: Rev. W. McCrea, 587

The Worldwide Ionospheric Data Base, D. Bilitza: Rev. H. Rishbeth, 821

CFC's

ultraviolet absorption in the atmosphere, temperature effects, 617

CHORUS EMISSIONS

see WAVES

COMET

Halley bow-shock, structure, 1355

CONJUGATE EFFECTS

auroral riometer absorption, dynamics of substorm onset, 127

CONVECTION

ionospheric, day side, response to Y-component of magnetosheath magnetic field, 13
polarcap, relation to sun-aligned arcs, 1

COSMIC RAYS

diurnal anisotropies, correlation with IMF, 1387
sidereal daily variations of galactic origin, observations with muon telescopes, 1267

COUPLING

magnetosphere- solar wind interaction, 627
thermosphere-ionosphere, numerical investigation, 1541

CRITICAL IONIZATION VELOCITY

single or multiple, in mixture of species, 1011

DOPPLER IMAGING

thermospheric winds in auroral oval, small scale structures and rapid fluctuations, 675

DUST

see PLASMA

ELECTRIC CURRENTS

cross-tail disruption and magnetospheric reconfiguration and aurora, 1361
field-aligned flows of thermal ions at high latitudes, 1187
in E-like planetary ionospheres, 1061
in F-like planetary ionospheres, 1327
ion flows, substorm associated, at plasma sheet boundary layer, 1251
ring current, storm-time, simulations, 1133

ELECTRIC FIELDS

dynamo of diurnal tide, effect of thermospheric circulation, 301
electrostatic noise generation, ion-beam acoustic instability, 695
electrostatic shocks, paired, polar magnetosphere, theory, 263
ionospheric, F-region, spectral characteristics, atmospheric turbulence, 79
magnetospheric, penetration to low-latitudes, 1051
polar cap potentials and auroral electrojet indices, 1207
thundercloud, formation of cavity in ionospheric E-region, 703

ELECTRONS

intensity maps of global distribution below the radiation belt, 483
populations above nightside auroral oval during magnetic quiet times, 1031

GEOMAGNETIC FIELD

AE indices and polar cap potentials, 1207
activity, interplanetary and solar causes, 109
dipole inclination to rotation axis, 1203
disturbances and polar cap convection, relation of sun-aligned arcs, 1
H changes at MAGSAT altitudes, 883
pulsations in daytime high latitude, and pulsating aurora, 149
storms, see STORMS
see also MAGNETOSPHERE

GRAVITATIONAL POTENTIAL

see SPACECRAFT, orbit analysis

GRAVITY WAVES

effects on airglow emissions, 1105
tidal effects and wind oscillations above Saskatoon, 1431

GREENHOUSE EFFECT

atmospheric heating and photodissociation rates, computer model, 807
ionospheric, changes in electron densities and layer heights, 945

HYDROMAGNETIC WAVES

see WAVES

INTERFEROMETRY

CW radar, study of localized auroral scatterers, 933

INTERPLANETARY

disturbance, event models, 575
hydrogen atoms, photoionization, 1225
magnetic field, B_z north, test of convection models, 1077
magnetic field, correlation with cosmic ray diurnal anisotropies, 1387
scintillations, density and turbulence, 955
shocks, quasi-perpendicular, acceleration of protons, 343

INTERSTELLAR MEDIUM

hydrogen, heliospheric, fluctuations in distribution induced by interstellar boundary conditions, 1487

IO

plasma diffusion from the Io torus, driven by centrifugal force of Jupiters rotation, 995

IONOSPHERE

absorption events and storm sudden commencements, 365
D-layer, effect of solar precipitation event of 16 Feb. 1984, 1479
Doppler oscillations, and ULF geomagnetic pulsations, model, 1581

dynamo, due to diurnal tides, effect on thermospheric circulation, 301
electron content, day to day variability, 743
field-aligned flows of thermal ions at high latitudes, 1187
F-layer irregularities, spectral characteristics, atmospheric turbulence, 79
F-region instability, ExB, low to midlatitudes, 273
greenhouse effect, electron densities and layer heights, 945
interaction with thermosphere, 1541
irregularities, from ionospheric plasma mixing by large-scale drifts, 961
plasma drift, interpreting ionosonde measurements, 1567
model and parameters, comparison with OI 630nm emission, 1243
plasma expansion, two dimensional model, 723
sporadic-E activity, related to meteoric influx, 145
TIDs, following onset of auroral substorm, 913
transient events, auroral, at magnetic noon, 973

JOULE HEATING

thermospheric, 207

KELVIN-HELMHOLTZ INSTABILITY

in dusty plasmas, 1577

MAGNETIC ANOMALY, SOUTH ATLANTIC

VLF disturbances following magnetic storms, 633

MAGNETOHYDRODYNAMICS

electric and magnetic field variations at 900 km, auroral e.m. disturbances, 97
electrostatic noise, broadband, contribution of ion-beams acoustic instability, 695
energization of ions in magnetotail during substorm, 491
equations in 16-moment approximation, interaction of thermal electrons with ion-cyclotron waves, 709
ions, acceleration in quasi-neutral current sheet, 751
ions, specularly reflected at quasi-perpendicular collisionless shocks, 419
magnetosonic and Alfven waves, linear theory, 823
planar stagnation-point flows with velocity shear, 411
power transfer, solar wind to magnetosphere, during storm, lifetime of ring current particles, 765

quasilongitudinal approximation for whistler-mode waves, 1551
resonant absorption of fast waves in a cold plasma, 1017

MAGNETOMETERS, SAMNET

MHD waves and SSC events, 603
Pi2 pulsation polarization patterns, 589

MAGNETOSPHERE

bowshock MHD waves, evolution of, 1069
configuration change due to cross-tail current disruption, 1361
convection, precipitation and plasma flow in plasma sheet, 355
coupling function for interaction with solar wind, 627
current sheet, quasi-neutral, ion acceleration, 751
electron concentration above auroral oval, 1031
electrons and electric fields, penetration to lower latitudes, 1051
electrostatic shocks, paired, in polar region, theory, 263
field line resonances excited by solar wind pressure variations, 1517
geomagnetic tail, pitch angle distribution of energetic ions, 851
interaction with solar wind discontinuities, satellite study, 841
magnetopause, dayside, structure of reconnection layer, 437
magnetosheath, Y-component magnetic field, ionospheric convection, 13
magnetotail, mapping of auroral horn, 1179
magnetotail, model, with current-free lobes, 255
plasma, see PLASMA
plasmasphere, interaction of thermal electrons with ion-cyclotron waves, 709

power transfer from solar wind, lifetime of ring current particles, 765
storms, see STORMS, MAGNETIC
trapping of energetic particles on open flux tubes, 1343
wave activity, equatorial, between 5 and 8 R_E, 1335

MARS

ionosphere, solar control of, 539

METEORS

dust influx, related to sporadic-E activity, 145
micrometeoroid detectors, electric dipole antennae, 949, 951
trains, oblique scattering of radio waves, 55, 925
Tunguska event, 1351

OBSERVATIONS

ground- and satellite-based, agreements, 1533

OXYGEN

excitation parameters, see REACTION KINETICS
nightglow emissions, see AIRGLOW

OZONE

photodissociation rates and atmospheric heating, 807
recombination spectrum, identification of bands in the atmosphere, 1121

PLASMA

Cerenkov radiation from field-aligned particles, 373
cloud evolution in ionosphere, computer simulation, 1375
density diagnostics, pulsation gradient measurements, 269
drift, vertical, in ionosphere, using ionosondes, 1567
dust,
  drag due to Coulomb collisions, 319
  dust-acoustic waves, 543
  Kelvin-Helmholtz instability, 1577
  low frequency electrostatic waves, 1143
expansion, ionospheric, two-dimensional model, 723
flow patterns in plasma sheet flux tubes during convection, 355
injection events, signatures in ionosphere and magnetosphere, 231
interstellar wind, cause of solar wind asymmetries, 383
ionospheric incoherent scatter data, effects of noise, 903
ionospheric mixing by large-scale drifts, 961
plasmasheet boundary layer ion flows, substorm associated, 1251
ram-wake measurements from sounding rocket, 653
solar, from coronal holes, 459

PRECIPITATION

electrons,
  and protons, Me , intensity maps below radiation belt, 483
  resonant, storm-time, at inner radiation belt, 785
  storm-related, into low-latitude magnetosphere, 1051
ionospheric, D-region, storm sudden commencement, 365
ions, pitch angle distribution in geomagnetic tail, 851
patterns, in plasmasheet flux tubes during magnetospheric convection, 355

PRECIPITATION

protons, solar, event of 16 Feb. 1984, effect in D-region and precipitation zones, 1479

PROTONS

acceleration, by quasi-perpendicular interplanetary shocks, 343
intensity maps, global distribution, below the radiation belt, 483
solar wind, velocity distribution, theory and observations, 1091

PULSATIONS

see WAVES

RADAR

incoherent scatter from ionospheric plasma, effects of noise, 903
interferometry, CW, localized auroral scatterers, 933
SABRE, MHD waves associated with SSC, 603

RADIO WAVES

scattering from meteor trains, theory, 55

REACTION KINETICS

obsorption cross-section, O_2 Herzberg continuum, in Schumann Runge bands, 287
absorption, UV, of CFC's and N_2O, temperature effects, 617
dissociative recombination of O_2^+ in nightglow, 889
excitation parameters for $O(^1S)$ in aurora, 161
excitation parameters for $O(^1S)$ and $O_2(^1\Sigma_g^+)$ in nightglow, 43
photoionization, two-step, of hydrogen atoms in interplanetary space, 1225
production mechanism for nightglow $O_2(^1\Delta_g)$, 529
quenching, collisional, of $O(^1D)$ by $O(^3P)$, 647
recombination spectrum of ozone, band identification, 1121
vibrational population of auroral O_2 $(b^1\Sigma_g^+)$, 835
vibrational population of O_2 $(A^3\Sigma_u^+)$ Herzberg I system, 1399

SATURN

auroral ions and electrons in outer magnetosphere, 1295

SHOCKS

collisionless, quasi-perpendicular, specularly reflected ions, 419
electrostatic, paired, polar magnetosphere, theory, 263

SPACECRAFT

geostationary orbit energy flow at substorm onset, ground-satellite correlations, 241
glow, surface, production of LBH N_2 bands, 555
laser ranging system, satellite, directional and photometric observations, 471
observations agreement, between ground and satellite, 1533
orbit analysis,
  AUREOL 2 rocket, geopotential harmonics, 1409
  COSMOS 482, atmospheric density, semi-annual variations, 637
  COSMOC 1603, 14th order resonance, 1147
  satellite 1967-102B, geopotential harmonics, 407
  TANSEI 4 rocket, geopotential harmonics, 1469
particle impacts, low velocity, new analysis, 567
radio pulses from satellites, resonant heating of ionospheric plasma, 173
ram-wake measurements of plasma, sounding rocket MAIMIK, 653
wake phenomena in ionosphere, sounding rocket, 395

STORMS, MAGNETIC

at South Atlantic magnetic anomaly, VLF disturbances, 633
power transfer, solar wind-magnetosphere, lifetime of ring current particles, 765
precipitation of resonant electrons at inner radiation belt, 785
ring current formation, simulation, 1133
solar-cycle distribution, dual peak in, 181
SSC's, observed in ionospheric absorption, 365
substorm onset,
  associated ion flows at plasma sheet boundary layer, 1251
  auroral, precipitated TIDs , 913
  dynamics from conjugate auroral riometer absorption, 127
  energy flow at geostationary satellite location, 241

event of 28 January 1983, global study, 1495
impulsive energization of ions in magnetotail, 491
radially antisunward propagated, in magnetotail, 771
triggering conditions, 211

SUN

coronal holes, solar plasma flows from, 459
flares, geoeffectiveness, new classification, 189
influence on Mars ionosphere, 539
solar wind,
alpha particle heating and acceleration mechanisms, 1305
asymmetries, interstellar wind causes, 383
coupling function to magnetosphere, 627
discontinuities, interaction with magnetosphere, satellite study, 841
power transfer to magnetosphere during storms, 765
pressure variations, field line resonances, 1517
proton precipitation event of 16 Feb. 1984, effects in D-region and precipitation zones, 1479
proton velocity distribution, theory and observation, 1091

THUNDERCLOUD

electrostatic field, influence on E-region, 703

TUNGUSKA EVENT

unusual phenomena on that night, 1351

WAKE PHENOMENA

sounding rocket, ionospheric, 395

WAVE GUIDE

'chemical' low frequency, in upper ionosphere, 1075

WAVES

activity, equatorial, between 5 and 8R_E , 1335
Alfven,
oblique, and fast magnetosonic, linear theory, 823
poloidal spatial structure, axisymmetric magnetosphere, 1231
standing wave structure, density inhomogeneity, 665
waveguide mechanism above F-layer, 1075
chorus emissions, direction finding, generation and propagation, 135
dust-acoustic waves in dusty plasma, 543
electrostatic, low frequency, in dusty plasma, 1143
gravity, tidal effects and wind oscillations, 1431
ion-cyclotron,
bands in VLF saucers, 507
interaction with thermal electrons, hydrodynamic equations, 709
Kelvin-Helmholtz instability, in dusty plasma, 1577
MHD pulsations,
absorption in cold plasma, 1017
associated with SSC, SABRE and SAMNET observations, 603
periods, mid-latitude, seven station study, 85
Pc4, gradient measurements, magnetospheric plasma densities, 269
Pc5, field line resonances, solar wind pressure variations, 1517
Pc5, ionospheric boundary conditions, azimuthal wave number, 1315
Pg, magnetic and optical signature, 1443
Pi1, associated auroral pulsations, 149
Pi2, polarization patterns on SAMNET, 589
ULF, and ionospheric Doppler oscillations, model, 1581
ULF models, collective collisions of thermal electrons, 953
vicinity of bow shocks, evolution of, 1069
VLF, at S. Atlantic magnetic anomaly following storms, 633
VLF, effects of solar proton precipitation event, 1479

VLF, quasiperiodic, and concurrent magnetic pulsations at L=4, 1555
resonances, field lines,
determination, two methods, 1573
solar wind pressure variations, 1517
TIDs, following onset of auroral substorm, 913
whistlers,
coherent Cerenkov radiated power from field-aligned test particles, 373
oblique, in presence of electron beams, 791
quasielectrostatic approximations, 311
quasilongitudinal approximation, magnetospheric plasma, 1551
spin-modulation diagnostics, 333
Storey angle, 327

ZODIACAL LIGHT

cloud structure, symmetry surface, 1461
structure, small scale, brightness observations, 517
